

Amendments To The Claims

1.(currently amended) A user interface comprising a simultaneous display of a plurality of first selectable actuatable icons[[,]] each representing a different duplicator[[,]] and a second selectable icon that when selected ~~actuated simultaneously~~ actuates the duplicator(s) represented by a selection of one or more of the first selectable icons ~~respective actuated duplicator~~.

2.(currently amended) The user interface as defined in Claim 1, wherein:
the simultaneous display of the plurality of selectable actuatable icons is a menu screen; and
each ~~said~~ selectable actuatable icon is a menu item.

3.(cancelled)

4.(currently amended) The user interface as defined in Claim 1, wherein the actuation of ~~the respective~~ plural duplicators occurs in a chronological sequence selected by the user on the UI.

5.(currently amended) The user interface as defined in Claim 1, wherein the actuation of ~~the respective~~ plural duplicators selected by a user on the UI occurs simultaneously.

6.(currently amended) The user interface as defined in Claim 1, wherein the UI displays a choice for actuation ~~selection of the respective~~ plural duplicators chronologically, sequentially, or both.

7.(cancelled)

8.(original) The user interface as defined in Claim 1, wherein each said duplicator has the capability of performing one or more functions selected from the group consisting of printing, magnetic tape recording, photo imaging substrate recording, recording an optically scanned image onto a magnetic media storage device, magneto optical writing, and electromagnetic radiation broadcasting transmission.

9.(original) The user interface as defined in Claim 8, wherein the printing is performed by a printer having the capability of performing one or more functions selected from the group consisting of dot matrix printing, thermal ink jet printing, laser printing, color printing, high quality photo reproduction, printing on substrates of varied composition, binding, collating, folding, stacking, stapling, stitching, edge-trimming, and paginating.

10.(currently amended) A user interface having multiple duplicator selections displayed upon a single display screen that, when selected ~~actuated after selection~~ by a user, initiates duplication tasks on each of the user selected duplicators.

11.(original) The user interface as defined in Claim 10, wherein each said duplicator has the capability of performing one or more functions selected from the group consisting of printing, magnetic tape recording, photo imaging substrate recording, recording an optically scanned image onto a magnetic media storage device, magneto optical writing, and electromagnetic radiation broadcasting transmission.

12.(original) The user interface as defined in Claim 11, wherein the printing is performed by a printer having the capability of performing one or more functions selected from the group consisting of dot matrix printing, thermal ink jet printing, laser printing, color printing, high quality photo reproduction, printing on substrates of varied composition, binding, collating, folding, stacking, stapling, stitching, edge-trimming, and paginating.

13.(cancelled)

14.(currently amended) A method for displaying a user interface, the method comprising[[:]] serving a user interface for display as a menu page, the menu page having a simultaneous display of a plurality of first selectable actuatable menu items for ~~selection by a user~~ each representing a different duplicator and a second selectable menu item that, when selected ~~actuated by said selection~~ actuates the duplicator(s) represented by a selection of one or more of the first selectable menu items respective duplicator; and

~~upon the actuation of one said actuatable menu item by said selection:~~

~~recording an image with a default duplicator by a scanning capability thereof; and~~

~~communicating the recorded image to each duplicator corresponding to each actuatable menu item selected on the user interface for duplication on each respective duplicator.~~

15-16.(cancelled)

17.(currently amended) The method as defined in Claim 14, wherein each said duplicator ~~to which the recorded image is communicated~~ has the capability of performing one or more functions selected from the group consisting of printing, magnetic tape recording, photo imaging substrate recording, recording an optically scanned image onto a magnetic media storage device, magneto optical writing, and electromagnetic radiation broadcasting transmission.

18.(original) The method as defined in Claim 17, wherein the printing is performed by a printer having the capability of performing one or more functions selected from the group consisting of dot matrix printing, thermal ink jet printing, laser printing, color printing, high quality photo reproduction, printing on substrates of varied composition, binding, collating, folding, stacking, stapling, stitching, edge-trimming, and paginating.

19.(original) A computer-readable media containing computer-executable instructions that, when executed on a computer, performs the method as defined in Claim 14.

20-23.(cancelled)
